## RESEARCH COMPOUND CATALOGUE

Internal Price Schedule

---

Prepared: 30 July 2026

### **Pricing in South African Rand (ZAR), Reconstituted (Pen).**

Excludes courier delivery.  
Subject to change without notice.

**CONFIDENTIAL — INTERNAL USE (product codes shown)**

# 1. Tissue Repair & Recovery

Peptides studied for healing, recovery and connective-tissue support.

| Image                                                                               | Product & Research Notes                                                                                                                                                                                                                                                                       | Retail (ZAR)  |
|-------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
|    | <b>BPC-157 10mg</b><br><b>Product Code: BPC10</b><br>Promotes blood-vessel formation, reduces inflammation and protects cells from damage — studied to speed the healing response in soft tissue, gut lining and joints.                                                                       | <b>R775</b>   |
|    | <b>TB-500 10mg</b><br><b>Product Code: TB10</b><br>Promotes migration of stem cells to injured areas, helps form new blood vessels, reduces inflammation and prevents excessive scar tissue; often studied alongside BPC-157 for combined soft-tissue recovery.                                | <b>R1,075</b> |
|   | <b>CJC-1295 + Ipamorelin</b><br><b>Product Code: CJIP</b><br>CJC-1295 extends how long each natural growth-hormone pulse lasts while Ipamorelin adds extra pulses, together creating a sustained increase in natural GH release — researched for recovery, body composition and sleep quality. | <b>R1,025</b> |
|  | <b>CJC-1295 (No DAC) 10mg</b><br><b>Product Code: CJD10</b><br>Extends the duration of the body's natural growth-hormone pulse for more sustained release without shutting down natural production — a popular short-acting option for GH-pulse research.                                      | <b>R975</b>   |
|  | <b>DSIP 10mg</b><br><b>Product Code: DSP10</b><br>Crosses the blood-brain barrier and interacts with the central nervous system to promote delta-wave (deep, restorative) sleep — a key subject in sleep-cycle research.                                                                       | <b>R975</b>   |
|  | <b>Ipamorelin 10mg</b><br><b>Product Code: IPA10</b><br>Mimics ghrelin to selectively stimulate growth-hormone release; studied for increased GH without materially disturbing cortisol or appetite hormones.                                                                                  | <b>R725</b>   |

| Image                                                                               | Product & Research Notes                                                                                                                                                                                                                                                   | Retail (ZAR)  |
|-------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
|    | <b>Pinealon 10mg</b><br><b>Product Code: PIN10</b><br>Investigated for its potential to support neuronal health, cognitive performance and cellular resilience.                                                                                                            | <b>R825</b>   |
|    | <b>TB-500 10mg (Alt SKU)</b><br><b>Product Code: TB10A</b><br>Promotes migration of stem cells to injured areas, helps form new blood vessels, reduces inflammation and prevents excessive scar tissue; often studied alongside BPC-157 for combined soft-tissue recovery. | <b>R1,075</b> |
|   | <b>TB-500 5mg</b><br><b>Product Code: TB5</b><br>Promotes migration of stem cells to injured areas, helps form new blood vessels, reduces inflammation and prevents excessive scar tissue; often studied alongside BPC-157 for combined soft-tissue recovery.              | <b>R775</b>   |
|  | <b>VIP 10mg</b><br><b>Product Code: VIP10</b><br>Modulates immune responses, reduces inflammatory cytokines, improves gut-barrier function and protects neurons — studied in gut-immune-brain communication.                                                               | <b>R1,575</b> |
|  | <b>BPC-157 5mg</b><br><b>Product Code: BPC5</b><br>Promotes blood-vessel formation, reduces inflammation and protects cells from damage — studied to speed the healing response in soft tissue, gut lining and joints.                                                     | <b>R626</b>   |
|  | <b>ARA-290 10mg</b><br><b>Product Code: ARA10</b><br>A non-erythropoietic EPO derivative studied for activating the innate repair receptor to reduce inflammation and support nerve and tissue repair.                                                                     | <b>R745</b>   |
|  | <b>KPV 10mg</b><br><b>Product Code: KPV10</b><br>A tripeptide fragment of alpha-MSH studied for its anti-inflammatory action in the gut and skin and for supporting tissue healing.                                                                                        | <b>R675</b>   |

| Image                                                                             | Product & Research Notes                                                                                                                                                                                                             | Retail (ZAR)         |
|-----------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
|  | <p><b>Sermorelin 10mg</b></p> <p><b>Product Code: SRM10</b></p> <p>A growth-hormone-releasing hormone analogue that signals the pituitary to release growth hormone naturally; studied for recovery, body composition and sleep.</p> | <p><b>R1,075</b></p> |

## 2. Metabolic & Weight Management

Compounds researched for metabolic, appetite and body-composition pathways.

| Image                                                                               | Product & Research Notes                                                                                                                                                                                                     | Retail (ZAR)  |
|-------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
|    | <b>AOD-9604</b><br><b>Product Code: AOD</b><br>Mimics the way natural growth hormone regulates fat metabolism, helping break down stored fat and prevent new fat formation without the broader effects of full-length GH.    | <b>R896</b>   |
|    | <b>IGF-1 LR3</b><br><b>Product Code: IGF1</b><br>Binds IGF-1 receptors to support anabolic signalling, protein synthesis, recovery pathways and metabolic regulation over an extended half-life.                             | <b>R1,575</b> |
|   | <b>Kisspeptin 10mg</b><br><b>Product Code: KS10</b><br>Activates the hypothalamic-pituitary-gonadal axis, stimulating release of LH and FSH — a core subject in reproductive-hormone research.                               | <b>R975</b>   |
|  | <b>MOTS-c 10mg</b><br><b>Product Code: MS10</b><br>Improves how mitochondria produce energy, helping cells burn fat and use glucose more efficiently, and activates AMPK — a key pathway in exercise and metabolic research. | <b>R815</b>   |
|  | <b>MOTS-c 20mg</b><br><b>Product Code: MS20</b><br>Improves how mitochondria produce energy, helping cells burn fat and use glucose more efficiently, and activates AMPK — a key pathway in exercise and metabolic research. | <b>R1,075</b> |
|  | <b>MOTS-c 40mg</b><br><b>Product Code: MS40</b><br>Improves how mitochondria produce energy, helping cells burn fat and use glucose more efficiently, and activates AMPK — a key pathway in exercise and metabolic research. | <b>R1,375</b> |

| Image                                                                               | Product & Research Notes                                                                                                                                                                                                                                        | Retail (ZAR)  |
|-------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
|    | <b>NAD+ 500mg</b><br><b>Product Code: NAD500</b><br>Acts as a helper molecule in hundreds of metabolic processes, especially mitochondrial energy production; elevated NAD+ is studied for cellular energy and repair pathways central to longevity research.   | <b>R875</b>   |
|    | <b>Retatrutide 10mg</b><br><b>Product Code: RT10</b><br>Activates GIP, GLP-1 and glucagon receptors — supporting satiety, more effective insulin use and increased energy expenditure; one of the most closely watched compounds in current metabolic research. | <b>R1,075</b> |
|   | <b>Retatrutide 20mg</b><br><b>Product Code: RT20</b><br>Activates GIP, GLP-1 and glucagon receptors — supporting satiety, more effective insulin use and increased energy expenditure; one of the most closely watched compounds in current metabolic research. | <b>R1,475</b> |
|  | <b>Retatrutide 30mg</b><br><b>Product Code: RT30</b><br>Activates GIP, GLP-1 and glucagon receptors — supporting satiety, more effective insulin use and increased energy expenditure; one of the most closely watched compounds in current metabolic research. | <b>R1,775</b> |
|  | <b>Retatrutide 40mg</b><br><b>Product Code: RT40</b><br>Activates GIP, GLP-1 and glucagon receptors — supporting satiety, more effective insulin use and increased energy expenditure; one of the most closely watched compounds in current metabolic research. | <b>R2,175</b> |
|  | <b>Tesamorelin 10mg</b><br><b>Product Code: TS10</b><br>Signals the pituitary gland to release growth hormone naturally rather than introducing GH directly; studied for its effect on visceral belly fat linked to metabolic risk.                             | <b>R1,176</b> |
|  | <b>Tesamorelin 20mg</b><br><b>Product Code: TS20</b><br>Signals the pituitary gland to release growth hormone naturally rather than introducing GH directly; studied for its effect on visceral belly fat linked to metabolic risk.                             | <b>R1,775</b> |

| Image                                                                               | Product & Research Notes                                                                                                                                                                                                                                        | Retail (ZAR)  |
|-------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
|    | <b>Tirzepatide</b><br><b>Product Code: TZ</b><br>Investigated for its potential to support glucose-dependent insulin secretion, appetite regulation and gastric-emptying pathways.                                                                              | <b>R1,276</b> |
|    | <b>Tesamorelin 5mg</b><br><b>Product Code: TS5</b><br>Signals the pituitary gland to release growth hormone naturally rather than introducing GH directly; studied for its effect on visceral belly fat linked to metabolic risk.                               | <b>R926</b>   |
|   | <b>5-Amino-1MQ 5mg</b><br><b>Product Code: AMQ5</b><br>Investigated for whether influencing NNMT pathways may affect energy expenditure, fat metabolism and body-composition regulation.                                                                        | <b>R601</b>   |
|  | <b>Lemon Bottle 10ml</b><br><b>Product Code: LMB10</b><br>A lipolytic solution studied for localised fat breakdown; a research injectable investigated for body-contouring applications.                                                                        | <b>R825</b>   |
|  | <b>Mazdutide 10mg</b><br><b>Product Code: MZ10</b><br>A dual GLP-1 and glucagon receptor agonist studied for appetite regulation, glucose control and increased energy expenditure.                                                                             | <b>R1,575</b> |
|  | <b>NAD+ 1000mg</b><br><b>Product Code: NAD1000</b><br>Acts as a helper molecule in hundreds of metabolic processes, especially mitochondrial energy production; elevated NAD+ is studied for cellular energy and repair pathways central to longevity research. | <b>R1,275</b> |
|  | <b>Semaglutide 10mg</b><br><b>Product Code: SG10</b><br>A GLP-1 receptor agonist studied for glucose-dependent insulin secretion, appetite suppression and slowed gastric emptying.                                                                             | <b>POA</b>    |

| Image                                                                               | Product & Research Notes                                                                                                                                                                        | Retail (ZAR) |
|-------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
|    | <b>Semaglutide 30mg</b><br><b>Product Code: SG30</b><br>A GLP-1 receptor agonist studied for glucose-dependent insulin secretion, appetite suppression and slowed gastric emptying.             | POA          |
|    | <b>SLU-PP-332 5mg</b><br><b>Product Code: SLU5</b><br>An ERR agonist ('exercise mimetic') studied for its potential to increase energy expenditure and fat oxidation without physical exertion. | POA          |
|   | <b>Tirzepatide 15mg</b><br><b>Product Code: TZ15</b><br>Investigated for its potential to support glucose-dependent insulin secretion, appetite regulation and gastric-emptying pathways.       | R975         |
|  | <b>Tirzepatide 30mg</b><br><b>Product Code: TZ30</b><br>Investigated for its potential to support glucose-dependent insulin secretion, appetite regulation and gastric-emptying pathways.       | R1,326       |
|  | <b>Tirzepatide 60mg</b><br><b>Product Code: TZ60</b><br>Investigated for its potential to support glucose-dependent insulin secretion, appetite regulation and gastric-emptying pathways.       | R1,875       |

### 3. Longevity & Cellular Health

Research compounds explored for cellular ageing, repair and resilience.

| Image                                                                               | Product & Research Notes                                                                                                                                                                                          | Retail (ZAR)  |
|-------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
|    | <b>Epithalon 10mg</b><br><b>Product Code: EP10</b><br>Activates telomerase to help lengthen telomeres and slow cellular ageing, and regulates melatonin production — linked to circadian and longevity research.  | <b>R686</b>   |
|    | <b>Epithalon 50mg</b><br><b>Product Code: EP50</b><br>Activates telomerase to help lengthen telomeres and slow cellular ageing, and regulates melatonin production — linked to circadian and longevity research.  | <b>R1,175</b> |
|   | <b>HCG 5000iu</b><br><b>Product Code: G5K</b><br>Investigated for its ability to stimulate endogenous testosterone production and support reproductive function.                                                  | <b>R775</b>   |
|  | <b>Selank 10mg</b><br><b>Product Code: SLK10</b><br>Modulates GABA, serotonin and dopamine systems; studied for reducing anxiety and stress without sedation — a focus of cognitive and stress-response research. | <b>R896</b>   |
|  | <b>Thymosin Alpha-1</b><br><b>Product Code: THA1</b><br>Investigated for its potential to support T-cell maturation, immune signalling and cytokine activity.                                                     | <b>R1,325</b> |
|  | <b>Semax 10mg</b><br><b>Product Code: SEM10</b><br>Increases brain-derived neurotrophic factor (BDNF) to promote neuron growth and survival; studied for effects on focus, mood and cognitive performance.        | <b>R896</b>   |

| Image                                                                               | Product & Research Notes                                                                                                                                                                                       | Retail (ZAR)  |
|-------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
|    | <b>SS-31 50mg</b><br><b>Product Code: SS50</b><br>Investigated for its ability to bind cardiolipin within the inner mitochondrial membrane, supporting mitochondrial efficiency and ATP production.            | <b>R1,875</b> |
|    | <b>FOXO4-DRI</b><br><b>Product Code: FOX</b><br>Disrupts the FOXO4-p53 interaction to allow apoptosis of senescent ('zombie') cells while largely sparing healthy cells — a focus of cellular-ageing research. | <b>R2,175</b> |
|   | <b>SS-31 10mg</b><br><b>Product Code: SS10</b><br>Investigated for its ability to bind cardiolipin within the inner mitochondrial membrane, supporting mitochondrial efficiency and ATP production.            | <b>R1,075</b> |
|  | <b>Glutathione 600mg</b><br><b>Product Code: GLU600</b><br>The body's master antioxidant, studied for its role in cellular detoxification, oxidative-stress defence and skin brightening.                      | <b>R675</b>   |

## 4. Specialty Combination Stacks

Pre-combined blends formulated for convenient multi-pathway research.

| Image                                                                               | Product & Research Notes                                                                                                                                                                                                                                                                                                                                | Retail (ZAR)  |
|-------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
|    | <b>Wolverine Blend - BPC-157 + TB-500 10mg (5mg+5mg)</b><br><b>Product Code: WLVI0</b><br>A BPC-157 + TB-500 blend (5mg+5mg): BPC-157 targets rapid localised repair of gut, tendons and ligaments while TB-500 promotes whole-body healing, flexibility and blood-vessel formation — researched for accelerated recovery across multiple tissue types. | <b>R976</b>   |
|    | <b>BPC-157 + TB-500 20mg</b><br><b>Product Code: BT20</b><br>A BPC-157 + TB-500 blend: BPC-157 targets rapid localised repair while TB-500 promotes whole-body healing, flexibility and blood-vessel formation — researched for accelerated recovery across multiple tissue types.                                                                      | <b>R1,376</b> |
|   | <b>GLOW Stack 70mg</b><br><b>Product Code: GLW70</b><br>A regeneration and skin-quality stack: GHK-Cu promotes collagen production and skin regeneration while companion peptides support tissue remodelling and structural repair as a combined formula.                                                                                               | <b>R1,426</b> |
|  | <b>GHK-Cu 100mg</b><br><b>Product Code: GHK100</b><br>Stimulates collagen and elastin production, promotes wound healing, reduces inflammation and acts as a powerful antioxidant; the copper complex is widely researched for skin, hair and tissue-remodelling applications.                                                                          | <b>R975</b>   |
|  | <b>GHK-Cu 50mg</b><br><b>Product Code: GHK50</b><br>Stimulates collagen and elastin production, promotes wound healing, reduces inflammation and acts as a powerful antioxidant; the copper complex is widely researched for skin, hair and tissue-remodelling applications.                                                                            | <b>R775</b>   |
|  | <b>KLOW Stack 80mg</b><br><b>Product Code: KLOW80</b><br>A KLOW stack: GHK-Cu promotes collagen production and copper delivery for skin and tissue regeneration while partner peptides support recovery, hydration and structural repair as a combined formula.                                                                                         | <b>R1,626</b> |

## 5. Hormonal & Vitality

Peptides investigated for hormonal, libido and pigmentation pathways.

| Image                                                                              | Product & Research Notes                                                                                                                                                                                                     | Retail (ZAR) |
|------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
|   | <b>Melanotan 2 10mg</b><br><b>Product Code: MT10</b><br>Activates melanocortin receptors in skin cells to trigger melanin production for a protective tan with UV exposure; also studied for effects on appetite and libido. | <b>R776</b>  |
|   | <b>PT-141 10mg</b><br><b>Product Code: PT10</b><br>Activates melanocortin receptors in the hypothalamus to trigger natural sexual arousal and desire; unlike some approaches it does not act directly on blood flow.         | <b>R755</b>  |
|  | <b>Snap-8 10mg</b><br><b>Product Code: SNP10</b><br>Studied for its potential to influence neurotransmitter signalling associated with facial muscle contractions — a topical, cosmetic-research peptide.                    | <b>R675</b>  |

## 6. Accessories & Consumables

Reconstitution and delivery consumables for laboratory use.

| Image                                                                               | Product & Research Notes                                                                                                                                                                                                                           | Retail (ZAR) |
|-------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
|    | <b>Bacteriostatic Water</b><br><b>Product Code: BAC</b><br>Sterile water containing a small amount of benzyl alcohol, used to reconstitute freeze-dried peptides prior to research use. Not a peptide — an essential laboratory consumable.        | <b>Free</b>  |
|    | <b>Bacteriostatic Water 10ml</b><br><b>Product Code: BAC10</b><br>Sterile water containing a small amount of benzyl alcohol, used to reconstitute freeze-dried peptides prior to research use. Not a peptide — an essential laboratory consumable. | <b>R326</b>  |
|   | <b>Cartridge</b><br><b>Product Code: CRT</b><br>Replacement cartridge accessory for compatible pen-style reconstitution and delivery devices.                                                                                                      | <b>R72</b>   |
|  | <b>Disposable Pen</b><br><b>Product Code: DPN</b><br>Single-use pen device for convenient reconstitution and measured delivery of research compounds.                                                                                              | <b>R526</b>  |

## 7. Options & Delivery

Cold-chain packaging and courier options added at checkout.

| Image                                                                                                                                              | Product & Research Notes                                                                                                             | Retail (ZAR) |
